

## The Meeting Place For The Global LNG Industry

---

*LNG Exchanges with **Devon Hyver, Director Sales and Market Development**  
**EMEA, BU Electrolyzer, Plug Power***

---

- **What are the themes to frame market development in 2022/3, and what are the associated risks?**

Regulation in EU toward decarbonization and alternative energies, associated risks could be a new dependency instead of independency and not having enough resources for all, rising price of energy like today in EU.

- **How can energy security be balanced with decarbonisation pledges?**

With alternative energies such a renewable, green hydrogen, E-fuel, green ammonia to cut dependency and move toward decarbonization through disruptive technologies (hydrogen vehicles, dual fuel shipping container boats, cogeneration plant running on green hydrogen).

- **What do you consider the key disruptors to LNG through to 2040?**

LNG infrastructures need to be compatible with alternative energies such as E-Fuel/ green ammonia /green hydrogen or think in a way to upgrade then toward these new energies.

- **You are speaking at the World LNG Summit this year. What are you most looking forward to at the event?**

Way toward decarbonisation by major LNG players (producers and off takers).
